## Press Release: DWS joins the partnership with Techniplas

DWS has entered in a partnership with Techniplas, a leading global design and manufacturing provider of automotive products and services to further expand its additive manufacturing capabilities. DWS will bring its entire portfolio of professional-grade 3D printing products to the open innovation program at Techniplas' Additive Manufacturing Innovation Center in Ventura, California.

"With the partnership we are accelerating the momentum and strengthening the commitment to design and develop the best digital manufacturing tools together with like-minded, industry leaders," said **Avi Reichental**, Vice-Chairman, Techniplas and CEO, Techniplas Digital. "DWS brings to this collaboration a comprehensive suite of precision printers capable of delivering high-volume metal castings and performance rubber materials that are ideal for automotive applications."

Techniplas' open innovation program is fostering powerful partnerships and delivers ecosystem-wide benefits from shared technologies and domain expertise that create new growth of opportunities within the 3D printing industry. With the latest lightweighting and additive technology companies joining in, Techniplas' open innovation program is fast becoming the preeminent hub for industry 4.0 collaboration.

"Techniplas' open innovation program is the perfect environment for our latest printers to deliver their true potential," said **Maurizio Costabeber**, General Manager, DWS. "With Avi and the Techniplas team, we have found a partner that can open up completely new markets for us and help us mainstream the use of our digital manufacturing solutions within the automotive industry and beyond. We're proud to be a member of this fantastic program."

### About **DWS**

DWS is very much in the forefront of additive manufacturing technology. A respected stereolithography pioneer and leader, DWS is making additive manufacturing 4.0 real by delivering the most advanced photopolymer additive manufacturing systems, materials and digital tools available. For decades the Italian company has been enabling people to live better, engineers to optimize their designs and companies to bring better products to market.

### About **Techniplas**

Techniplas is a leading global design and manufacturing provider of engineered products and services that are helping to shape the future of mobility. The 2,000 associates around the world are passionate about making the connected world. By continuously expanding the reach of data enabled cognitive technologies into everything the company does, Techniplas delivers personalized, performance-enhanced and sustainable mobility. For more information, please visit [www.techniplas.com](http://www.techniplas.com).
